INDIANA

LAKES GUIDE

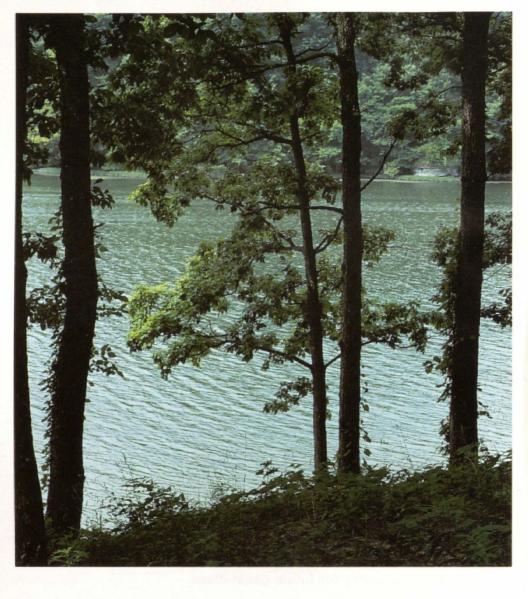

PUBLISHED BY DEPARTMENT OF NATURAL RESOURCES 1993

> DIVISION OF WATER 402 W. WASHINGTON STREET ROOM W264 INDIANAPOLIS, INDIANA 46204

EVAN BAYH, GOVERNOR FRANK O'BANNON, LT. GOVERNOR

PATRICK R. RALSTON, DIRECTOR

PRICE \$4.00

The purpose of the Indiana Lakes Guide is to provide information on Indiana's public and private lakes. Access to a listed lake through property dedicated for use by the general public is indicated as public access. Access through private property, including privately-owned marinas, is indicated as private access. Permission of the property owner may be necessary.

The figures and estimates of the lakes data in this guide were derived from the best reliable data available, however, limitations inherent in existing data may reduce the accuracy of such information.

"T by 2000" Indiana Lake Enhancement Program

The Lake Enhancement Program is a part of "T by 2000," a statewide strategy for dealing with Indiana's soil erosion and sedimentation problems. The goal for lake enhancement is to control sediment and associated nutrients into public lakes. To help accomplish that goal, IDNR's Division of Soil Conservation is providing technical and financial assistance for lake enhancement needs.

Interested parties may request application forms and guidelines from the Division of Soil Conservation, Lake Enhancement Program, 402 West Washington Street, Room W 265, Indianapolis, Indiana 46204.

PERMITS TO ALTER THE BED OR SHORELINE OF A PUBLIC FRESHWATER LAKE

The Lakes Preservation Act, IC 13-2-11.1, charges the Department of Natural Resources with the responsibility of regulating all construction on Indiana's public freshwater lakes. Upon application by the owner of land abutting a public freshwater lake, the Department may issue a permit to change the shoreline or alter the bed of a public freshwater lake after investigating the merits of a completed "Application for Construction in or on a Public Freshwater Lake." Typical alterations or changes would include the construction of seawalls, seawall refaces, underwater beaches, boat wells, boat ramps, and any dredging or digging operations below the normal water level of a public freshwater lake. A permit is valid for two years. If the applicant wishes to have a permit renewed, it is treated as a new application, however, the property may not need to be reinspected.

Pursuant to IC 13-2-15, a permit is also required for the construction, reconstruction, repair or recleaning of any ditch or drain having a bottom elevation lower than the normal or legally established water level of a freshwater lake of 10 or more acres and within one-half mile of the lake.

All applications must be accompanied by a non-refundable fee of twenty-five dollars (\$25). Also, no application can be acted on until affected property owners are properly notified pursuant to IC 14-3-18. Contact the Lake Permits Section of the Division of Water at (317) 232-5661 for additional information.

INDIANA LAKES: A HISTORY

Since the earliest days of Indiana history, lakes have had an important impact on the lives of the people of the Territory and the State.

For the Indians, the first settlers of the lakes region, the lakes were a source of life. The Indian hunted waterfowl, gathered mussels and lily roots and ate fish for food. The skins of animals trapped around the lakes were used for clothing and trading. It was little wonder that the Indian's final stand was made in the lakes region. Indian heritage led to many present day names of lakes and lake villages, such as Wawasee, Papakeechie, Menominee, Potawatomi, Manitou, and many others.

Pioneer settlers began the task of reclaiming the fertile swamp areas of the central and northern parts of the State through small drainage projects. Later, drainage acts passed by the State legislature designed to increase the amount of fertile cropland led to wide-scale drainage of the northern third of the State. These acts led to the destruction of much of the State's wetland areas, most notably in the Kankakee and Calumet river basins. Also, suffering greatly from these drainage projects were Indiana's lakes. For the same reasons, principally the thirst for more productive land, many of Indiana's most beautiful lakes were lowered, many completely drained. Few drainage projects took place in southern Indiana due to the existing topography, the hills being spared by the glaciers.

Glaciation during the Pleistocene geologic epoch is responsible for forming the natural lakes of northern Indiana. Two groups of the Wisconsinan glacier, the Erie-Saginaw and the Michigan-Saginaw lobes, formed two distinct belts of natural lakes. The Erie-Saginaw Lobe formed hundreds of lakes along a southwest to northeast line which includes parts of present day Kosciusko, Noble, Steuben, LaGrange, Dekalb and Whitley counties. This belt constitutes most of the natural lakes in Indiana. The Michigan-Saginaw Lobe formed the lakes on a north to south line which includes parts of Fulton, Marshall, Starke, LaPorte, Porter and Lake counties. But in the days before humans settled the area, there were many more lakes than presently exist. Natural extinction of lakes has been occurring since the glaciers melted away, their former basins now the sites of extensive bogs and wetlands.

The location of the glacier's southernmost advance determines why there are no significant natural lakes in southern Indiana. In order for large lakes to exist in central and southern Indiana, it was necessary to excavate a large pit and allow it to fill with water, which is common in the mining areas of southwestern Indiana, or to create a reservoir by damming a stream. In central and southern Indiana, these man-made reservoirs, often built for flood control or water supply by the U.S. Army Corps of Engineers or local conservancy districts, were found to provide a host of recreational opportunities and natural diversity. Some examples include Patoka Reservoir, Dogwood Lake, Geist Reservoir, Brookville Reservoir, Mississinewa Reservoir and Hardy Lake.

It would take years of abuse and overuse before the lakes were appreciated for the valuable resource they are. Early conservation efforts led to the enactment of laws which protected water quality and natural and scenic beauty. Public appreciation increased with more education and understanding of natural processes.

Something never dreamed of by the state's earliest settlers is the enormous recreational potential of the lakes. Eventually, with a trend toward a shorter work week, the public had more time for recreation. Since a visit to the lakes was inexpensive, the lakes became large attractions. A better transportation network eased accessibility to all parts of the State. Soon, cottages and permanent homes began to dot the shores. Today, the lakes are shared by thousands of sport enthusiasts who live in lakefront homes or are frequent visitors. A few of the many recreational activities that exist are fishing, boating, swimming, snowmobiling and nature study.

Also, less known, is the lakes' contribution to water conservation. Lakes and wetlands have a large storage capacity, in that floods pass through them slowly, spreading out over the acreage of the lake, instead of raging through as a stream does. Many reservoirs were built for that reason, in areas that had a history of unusual flooding problems. This method of flood control is not foolproof, however, because lakes have enormous watersheds and in the event of a severe flood, the capacity to store water is often overwhelmed.

Another overlooked value of the lakes is the amount of wildlife habitat that is provided in and around the lakes. A host of Indiana's wildlife and plants call the lakes and wetlands home, many of them endangered species. The lakes provide a stopover for migratory waterfowl, and home for furbearers and a variety of aquatic species. The wide diversity of wildlife that live in and around the lakes is the best reason to continue the protection of this valuable Indiana ecosystem.

The wise use of Indiana's lakes is not only the responsibility of the Department of Natural Resources, but it is up to everyone to do their part in preserving the high quality of Indiana's lakes.

INDIANA WETLAND CONSERVATION AREAS

Indiana's Wetland Conservation Program was initiated in 1967 with the acquisition of a portion of the Mallard Roost wetland. The program's purpose is to provide protection and management for significant wetland areas within the State. These protected wetlands may be in their natural state and exhibit flora and fauna which have remained virtually undisturbed through past years; or they may be altered to preserve and manage adjacent lakes, watersheds and high quality fish and wildlife habitat. The ability of wetlands to recharge groundwater, store flood water, filter excess nutrients, trap sediments and provide excellent fish spawning and wildlife habitat are all characteristics that need to be recognized and understood.

Indiana has lost more than 4.8 million acres of wetlands and is losing several thousand additional acres each year. Fully 86% of Indiana's original wetlands have been destroyed during the past 200 years. The many positive values of wetlands justify their protection, preservation and management.

Presently, the Wetland Conservation Program encompasses 20 areas totaling over 4,650 acres. It is the intention of the Department of Natural Resources to purchase wetlands only from willing sellers. Fortunately, several areas have been donated by concerned individuals and conservation-minded organizations such as Acres Incorporated, the Indiana Chapter of the Nature Conservancy, Northern Indiana Public Service Company, and the Division of Nature Preserves of the Indiana Department of Natural Resources.

All Wetland Conservation Areas are available for public use. Each property may include opportunities for hunting, fishing, trapping, hiking, and boating. It should be noted, however, that not all of these activities are permitted on every property. Permitted public usage is listed with each individual property description. The following public use regulations apply to some wetland conservation areas:

- No permanent duck blinds permitted; temporary blinds may be constructed using material from the property;
- (2) subject to state boating regulations;
- (3) no watercraft may be left unattended on the property; and
- (4) motors used to power watercraft are restricted to electric trolling motors only.
